CHALLENGE

Care teams struggle with running on time

- Disparate systems (e.g., lights, flags, buttons) only tell part of story.
- Doctors and staff need to sync up to coordinate what's next; each person wastes 20 to 60 minutes per day trying to manage the queue.
- Without real time insight, the care team loses time, and patients wait longer.

SOLUTION

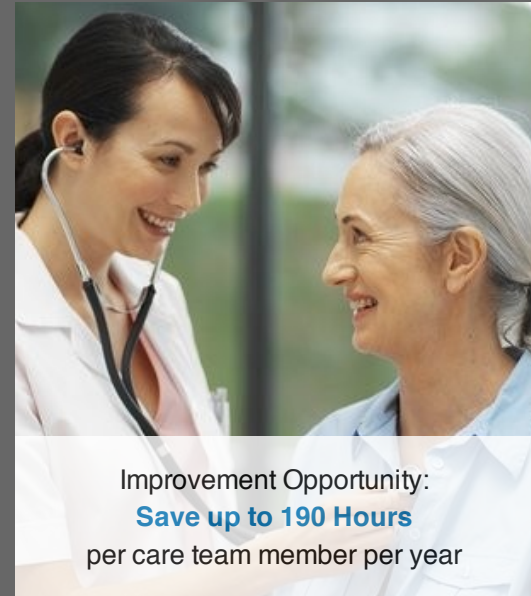

Real time insight that enables care teams to proactively manage their day to improve efficiency and patient experience

- Service conveniently displays where patients and team members are, and provides personalized views of what's expected next.
- System continuously monitors wait time, prioritizes tasks, and enables better team coordination.

Use real time insight to:

- Save provider and staff time, and improve team coordination.
- Make mid-course adjustments to reduce patient waits.
- Know when to handle an additional patient concern, and when to reschedule.
- Monitor and level staff loads to improve efficiency, reduce stress.

Improvement Opportunity:
Save up to 190 Hours
per care team member per year

FEATURES

- Business rules prioritize tasks, maintain order
- Robust analytics improve flow process
- Automated request for assistance
- Integration with scheduling system

RESULTS

Better real time insight to manage daily flow and run on time

Better:

- Less stress, easier to get job done
- Fewer patient waits
- Continuous measurement

Faster:

- Immediate (real time) insight
- Rapid flow improvement

More Cost-effective:

- Save doctor and staff time
- Reduce staff overtime
- Increase productivity and throughput
